Descripció

La intenció del treball era reconvertir el mapa de *Dust II*, de *Counter Strike Source*, a una nau futurista amb un estil de ciència-ficció.

Les meves referències principals han estat *Alien Isolation* i *Star Wars*. Del joc *Alien Isolation* he volgut agafar la iluminació, fent que sigui un mapa relativament fosc i generi incomoditat al jugador.

Per buscar els assets la meva primera font de referències ha estat Google imatges, buscant els assets que necessitava i guardant les imatges a Miro per crear un moodboard.

A l'hora de texturitzar he buscat crear un ambient molt net, però amb detalls que donin realisme als models 3D. Per això m'he basat molt en materials intel·ligents, ja que podia detallar coses com pols, desgast a les curvatures del model i petits detalls que influeixen a la il·luminació.

La gestió del projecte l'he fet a través de GitHub, per mantenir el control de versions del projecte així com poder controlar el seguiment de l'organigrama.

Bibliografia i memòria de Software

Per buscar les referències he utilitzat Google Images, i les he guardat a una Miro Board. Mentre modelava, a més a més, tenia les imatges a PureRef.

Per modelar he emprat 3dsMax, i Substance Painter per les textures. Per exportar els assets modulars, en comptes de fer-ho un a un, vaig trobar un script de 3dsMax que els exportava en massa (enllaç <u>aquí</u>). Finalment per muntar el mapa he fet servir Unity.

Pel control de versions (i per sincronitzar el progrés entre el portàtil i l'ordinador de sobretaula), he creat un repositori de GitHub, on anava penjant el progrés. Com els arxius de Substance Painter eren molt grossos, però, no he pogut sincronitzar-los a GitHub, per tant, els he anat passant manualment a un servidor.
